

TenPoint
Component Layers

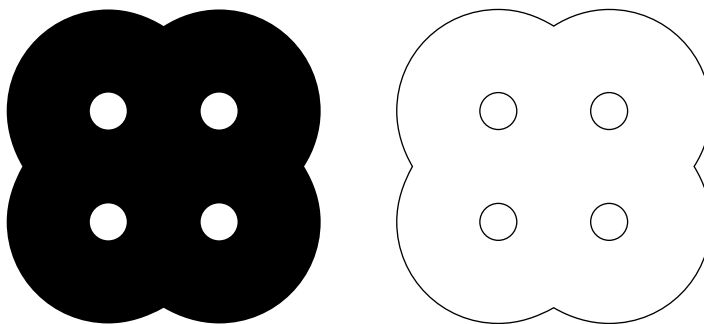

MuirMcNeil TenPoint is a modular type system constructed from repetitions of a single cell – a circular disc with an open counterform – on a fixed geometric grid.

TenPoint has seven sizes: 01, 02, 03, 04, 05, 06 and 08; the numerical index referring to the cell count repetitions which define the overall body height of each size.

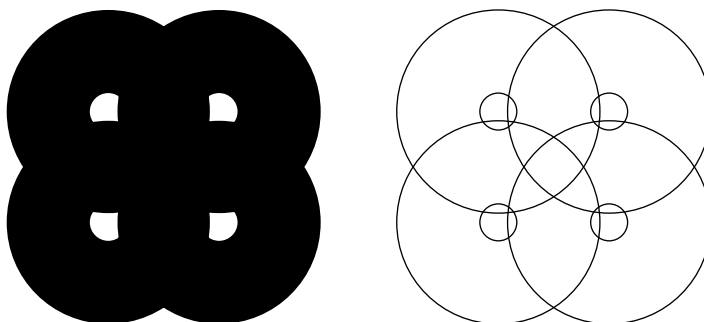

Each size is issued as five variant typefaces. In addition to a complete ready-to-use version with transparent counterforms (01 Comp), four component versions, shown here, break apart each letter into a series of parts which can be used in assembling layered constructions.

Users should note that the PostScript multiple path versions supplied are design tools only. They may not render correctly on screen and could also perform unexpectedly on low resolution laser printers. Users are advised to convert complex designs to outlines before sending to output.

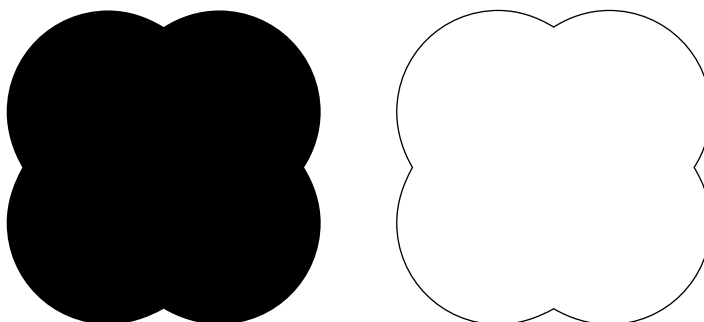

01 Comp
Ready-to-use compound paths with open counterforms (construction contour shown on right).

02 Path
Multiple overlaying paths (construction contour shown on right).

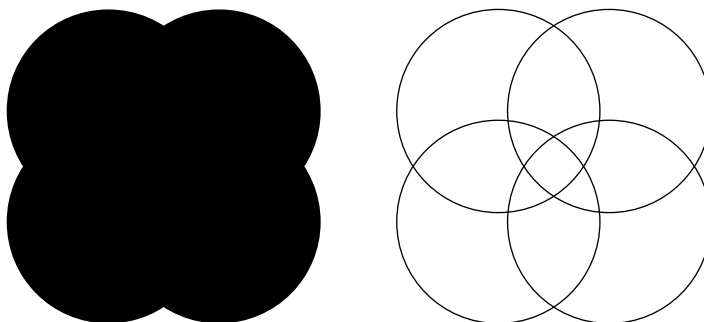

03 Edge
Merged outer contours only; no counterforms (construction contour shown on right).

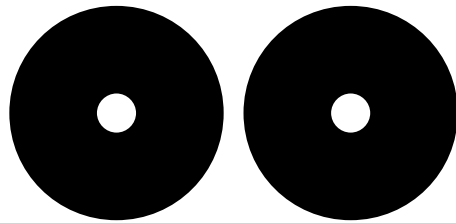

04 Dot
Counterforms only as solid dots (construction contour shown on right).

05 Circle
Separate outer contours only; no counterforms (construction contour shown on right).

The image shows the words 'one', 'four', 'seven', 'two', 'five', 'six', 'nine', and 'three' arranged in five rows. Each letter is constructed from thick black outlines with small white circular dots placed at various points along the strokes, creating a dotted or 'stippled' effect. The words are arranged as follows: 'one four' on the first line, 'seven' on the second line, 'two five' on the third line, 'six nine' on the fourth line, and 'three' on the fifth line.
