The TwoBit type system consists of five variants, each in nine weights. TwoBit A is a conventional monospaced typeface with rounded terminals, while four related typefaces, TwoBit B, C, D and E, are split into sub-component segments, all of which are designed to interlock precisely in layers.

TwoBit is a part of MuirMcNeil's extensive Two Type System. The many subgroups that comprise the Two System have not been designed as independent alphabets but as the framework of an expansive design space in which individual glyphs are configured to collaborate with each other harmoniously.

A common grid determines the positioning of both letterforms, the spaces between them, and sets of corresponding base pattern panels, with every element aligning precisely, so that the superimposition of any pair of the system's 200+ modular alphabets will result in a single, unique instance taken from thousands of possible combinations. Working with design software, users can amalgamate selected styles either in precisely interlocking layers or in calibrated offsets, applying outlines, tints, colours, textures, patterns and transparencies as appropriate.

The design opportunities offered by the Two System are documented in detail in System Process Form, published by Volume / Unit Editions and Thames & Hudson. The publication presents a curated selection of these two-part compounds along with many even more exuberant type forms composed from the millions of options afforded by combinations of three layers.

TwoBit A

TwoBit B

TwoBit C

TwoBit D

TwoBit E

In MuirMcNeil TwoBit, individual characters and letter segments operate as variable components. Overlaid in pairs, TwoBit's 45 fonts allow for a possible 2,025 combinations and, when selectively implemented with any of the 200+ fonts from the MuirMcNeil Two System, millions of combinations can be achieved.

Users should note that the versions of TwoBit supplied as multiple vectors are configured to function as design tools. Users are therefore advised to convert complex designs to outlines before sending to output.
